To whom it may concern;

This is just a heads up to designers who don't think they can make a mistake.

Sid Sandback saved my life.

I designed a plastic housing and was getting ready to send the file out to have a mold made. I decided to spend the pittance that Sid asked for a 3D printed prototype. The part was wrong and could not have been assembled.

This saved me thousands and I realize that I must print every part before committing to production.

Thanks again

Doc Holloway
